

Management's Discussion and Analysis

First Quarter Report – March 31, 2014

(Expressed in Canadian dollars, unless otherwise noted)

May 30, 2014

For further information on the Company, reference should be made to its public filings on SEDAR at www.sedar.com. Information is also available on the Company's website at www.chesapeakegold.com. This Management's Discussion and Analysis ("MD&A") should be read in conjunction with the unaudited condensed consolidated interim financial statements for the period ended March 31, 2014 and the audited consolidated financial statements for the year ended December 31, 2013 and related notes thereto which have been prepared in accordance with International Financial Reporting Standards. The MD&A contains certain Forward Looking Statements which are provided on Page 18.

OVERVIEW

Chesapeake Gold Corp. (the "Company") is a development stage company focusing on the discovery, acquisition and development of major gold-silver deposits in North and Central America. The Company trades on the TSX Venture Exchange under the symbol "CKG". The Company has its head office in Vancouver, B.C.

The Company's primary asset is the Metates gold-silver project ("Metates") located in Durango State, Mexico. The Metates project is one of the largest undeveloped gold and silver deposits in Mexico. A pre-feasibility study ("PFS") on Metates was completed and filed on SEDAR during the first quarter of 2013. On a prudent cash management basis, the Company continues to work towards completing a final feasibility study.

The Company also has a portfolio of exploration properties in Mexico comprising 49,808 hectares in the states of Durango, Sinaloa, Oaxaca and Veracruz. In November, 2010 the Company completed a business transaction to sell its Talapoosa project and two of its Mexican properties, La Gitana and La Cecilia, to Gunpoint Exploration Ltd. (formerly Christopher James Gold Corp.) in exchange for a controlling interest in Gunpoint Exploration Ltd. ("Gunpoint"). The Company currently owns approximately 74.75% of Gunpoint.

HIGHLIGHTS – Q1 2014

- Cash and cash equivalent balance as at March 31, 2014 was \$33.1 million.
- During the three months ended March 31, 2014, the Company spent \$0.51 million on the Metates project conducting geotechnical reviews, environmental baseline studies and engineering work in support of a full feasibility study
- Completed test work determined that dry stacking vs hydraulic impoundment of the neutralization residue from the process facilities will greatly reduced the footprint of the plant site
- The Company commenced the evaluation of lower initial throughputs of 30,000 - 40,000 tpd vs the Phase I 60,000 tpd in the PFS incorporating the recent test work and flexibility of the higher ore grades and lower strip ratio early in the mine life.
- Subsequent to March 31, 2014, the Company acquired the 1.5% net smelter royalty on the Metates project for US\$9.0 million

METATES (DURANGO STATE, MEXICO)

Overview

Metates is one of the largest, undeveloped disseminated gold and silver deposits in Mexico. The property is comprised of fourteen mineral concessions totaling 14,727 hectares. The Metates deposit is hosted by Mesozoic sedimentary rocks that have been intruded by a quartz latite body up to 300 meters thick and 1,500 meters long. Mineralization occurs in two zones: the Main Zone which is centered around the intrusive and the North Zone, within the sediments including conglomerate, sandstone and shale. The gold-silver mineralization occurs as sulphide veinlets and disseminations in both the intrusive and sedimentary host rocks.

Pre-Feasibility Study

A PFS was prepared by M3 Engineering of Tucson (“M3”), Arizona and filed on SEDAR in March 2013. After a routine technical disclosure review conducted by the British Columbia Securities Commission, the Company subsequently filed an amended PFS on November 8, 2013. The project economics and the conclusions and recommendations in the amended report are the same and remain unchanged from those contained in the original PFS.

Highlights of the PFS are summarized below:

- Proven and probable mineral reserves of 18.5 million ounces gold, 526 million ounces silver and 4.2 billion pounds of zinc
- Average annual production for year 2 through 7 of 845,000 ounces gold, 25.1 million ounces silver (1,309,000 ounce gold equivalent*) and 190 million pounds zinc, at an average gold equivalent cash cost of \$355 USD per ounce, net of zinc credits
- 25 year mine life with average annual production of 659,000 ounces gold, 15.9 million ounces silver (954,000 ounces gold equivalent*) and 143 million pounds zinc, with an average life of mine (“LOM”) gold equivalent cash cost of \$493 per ounce, net of zinc credits.
- Average annual net operating income of \$1.3 billion in operating years 2 through 7 with cumulative LOM pre-tax net operating income of \$20.3 billion.
- Initial capital cost of \$4.36 billion including \$631 million in contingency costs and excluding sustaining capital cost of \$584 million
- At base case metal prices**, pre tax capital payback of 4.1 years and 4.9 years after-tax
- Net present value (“NPV”) pre-tax of 4.1 billion at an 8% discount rate generating an IRR of 21.1%, and after-tax NPV of \$2.5 billion and 16.6% IRR

*Gold equivalent ounces are defined as gold ounces plus silver ounces/54.0 on base case metal prices

** Gold - US\$1350/oz, Silver - US\$25/oz and Zinc – US\$1/lb

Mineral Reserves

The PFS uses as a basis the updated mineral resource estimate prepared by Independent Mining Consultants of Tucson, Arizona (“IMC”) that was reported in February 2012. The open pit mineral reserves were estimated within a detailed engineered pit design by using the measured and indicated resources only.

IMC developed an ore mining schedule which employed an elevated cut-off strategy in early years (year 2-7) which shortened the capital payback period and improved overall project economics. The above cut-off but lower than mill feed grade ore mined in the earlier years is placed in a low grade ore stockpile which is processed during the last six years of the mine life (year 20-25). The production schedule optimized mining both the intrusive and sediment hosted ore rock types based on crusher throughput so that the annualized feed rates to be processed ranged from 109,000 tpd to 138,000 tons per daytpd after a two mine ramp up to full production. The table below presents the mineral reserves for the Metates project based on the mine and plant production schedules. Measured and indicated mineral resources in the production schedule are converted to proven and probable mineral reserves, respectively. The low grade stockpile is classified as probable mineral reserve regardless of the original classification of the in-situ resource. The

mineral reserve amounts to 1.15 billion ore tonnes at 0.50 grams per ton (“g/t”) gold, 14.2 g/t silver, and 0.17% zinc (including the low grade stockpile). Contained metal amount to 18.5 million ounces of gold, 526 million ounces of silver and 4.2 billion pounds of zinc.

Metates Mineral Reserve								
Reserve Class	Ktonnes	AuEq* (g/t)	Gold (g/t)	Gold (Koz)	Silver (g/t)	Silver (Koz)	Zinc (%)	Zinc (M lbs)
Proven Mineral Reserve								
Mill Ore	270,291	0.99	0.68	5,883	18.0	156,423	0.17	1,037
Probable Mineral Reserve								
Mill Ore	574,242	0.78	0.54	9,878	14.3	264,015	0.15	1,886
Low Grade Stockpile	304,328	0.46	0.28	2,691	10.8	105,673	0.19	1,261
Total Probable Reserve	878,570	0.67	0.45	12,568	13.1	369,688	0.16	3,148
Proven/Probable Reserve								
Mill Ore	844,533	0.85	0.58	15,761	15.5	420,438	0.16	2,923
Low Grade Stockpile	304,328	0.46	0.28	2,691	10.8	105,673	0.19	1,261
Total Proven/Probable	1,148,861	0.74	0.50	18,452	14.2	526,111	0.17	4,185

*Gold equivalent grade is defined as gold (g/t) plus silver (g/t)/58.4. Overall metal recoveries are 89% gold, 76% silver and 85% zinc. Contained resources may not add due to rounding.

The PFS contemplates a conventional truck and shovel open pit mining operation with a nominal 120,000 tpd throughput. The key operating metrics of processed grades, tonnes mined and metal production are as follows:

Operating Metrics				
Operating Period	Years 2-7	Years 1-19 Active Mining	Years 20- 25 Stockpile	Years 1-25 Life of Mine
Material Mined				
Total Ore Mined From Pit (Mtonnes)	454	1,149	0	1,149
Ore To Process (Mtonnes)	259	845	304	1,149
Low Grade Ore To Stockpile (Mtonnes)	195	304	0	304
Waste Rock (Mtonnes)	371	1,158	0	1,158
Strip Ratio ⁽¹⁾	0.82	1.00	0.00	1.00
Average Milling Rate (Ktonnes/year)	43,204	45,181	48,404	45,954
Average Milled Grades				
Gold (g/t)	0.68	0.58	0.28	0.50
Silver (g/t)	23.8	15.5	10.8	14.2
Gold Equivalent (g/t)	1.12	0.87	0.48	0.74
Zinc %	0.25	0.16	0.19	0.17
Cumulative Metal Production ⁽²⁾				
Gold (oz.) (000) (Doré)	5,068	14,080	2,395	16,475
Silver (oz.) (000) (Doré)	150,539	317,384	80,319	397,703
Gold Equivalent (oz.) (000) ⁽³⁾	7,856	19,958	3,882	23,840
Zinc (million lbs.)	1,051	2,275	1,075	3,350
Average Annual Production				
Gold (oz.) (000)	845	741	399	659

Silver (oz.) (000)	25,090	16,695	13,387	15,908
Gold Equivalent (oz.) (000)	1,309	1,050	645	954
Zinc (million lbs.)	175.1	131.9	179.2	143.3
Cash Cost (\$/Au Eq Oz). Net of Zn/Cu	355	482	524	493

(1) Strip Ratio based on total ore tonnes mined to waste tonnes mined

(2) Overall metal recoveries are 89% Gold, 76% Silver and 85% Zinc

(3) Gold Equivalent based on Base Case metal price assumptions (Gold=\$1,350/oz. Silver=\$25/oz.) Gold Eq=Gold + Silver/54

Capital Costs and Project Economics

Total initial capital costs (including contingency) are estimated at \$4.36 billion which represents both the direct and indirect material costs for the development of Metates. The capital investment reflects outsourcing the dedicated oxygen plant and gas electric power plant.

The average life of mine operating costs, including mining, processing and G&A are estimated at \$13.59 USD per tonne or \$493 per ounce net of by-product revenue from zinc and copper production.

The financial results were developed for three different metal prices assumptions (base case, low case and high case); these assumptions were provided to M3 by Chesapeake.

The financial analysis for the base case indicates a pre-tax NPV of \$4.10 billion at a 8% discount rate, a 21.1% IRR and a payback of 4.1 years. On an after-tax basis at 8% discount rate, the NPV is \$2.50 billion USD with an 16.6% IRR and a payback of 4.9 years. The financial results are presented in table below:

Financial Results Summary			
Metal Price Assumptions	Base Case	Low Case	High Case
Gold (\$/oz.)	\$1,350.00	\$1,200.00	\$1,500.00
Silver (\$/oz.)	\$25.00	\$22.22	\$27.78
Zinc (\$/lb.)	\$1.00	\$1.00	\$1.00
Copper (\$/lb.)	\$3.00	\$3.00	\$3.00
Pre-Tax Economic Indicators			
NPV @ 5% (\$000)	\$6,684,234	\$4,839,127	\$8,529,340
NPV @ 8% (\$000)	\$4,081,428	\$2,763,696	\$5,399,160
IRR %	21.1	17.3	24.5
Payback (yrs)	4.1	4.7	3.6
After-Tax Economic Indicators			
NPV @ 5% (\$000)	\$4,458,983	\$3,072,553	\$5,840,683
NPV @ 8% (\$000)	\$2,503,940	\$1,505,396	\$3,498,342
IRR %	16.6	13.4	19.6
Payback (yrs)	4.9	5.8	4.3
Pre-Tax Cumulative Net Operating Income			
Total - All Metals Years 2-7 (\$000)	\$7,731,313	\$6,555,509	\$8,907,117
Total - All Metals Life of Mine (\$000)	\$20,180,575	\$16,612,569	\$23,748,580

The following table represent the year to date and project to date exploration expenditures on Metates:

<i>(tabled amounts are expressed in thousands of CAD dollars)</i> ⁽¹⁾	Three months ended March 31, 2014	Twelve months ended December 31, 2013	Project to date
Acquisition from American Gold in 2006	-	-	20,213.3
Concession	61.3	112.6	553.1
Assay	29.3	100.4	1,282.9
Camp & Supplies	16.8	373.4	3,251.4
Drilling	6.7	277.7	5,983.0
Environmental	1.1	1.7	46.8
Geological and engineering	385.5	3,177.0	19,642.9
Travel & other	12.0	59.5	1,008.5
Total additions	512.7	4,102.3	51,981.9

Chesapeake continues to advance Metates towards the completion of a full feasibility study (“FS”). M3 is the primary consultant to complete the FS along with input from several leading international consultants that also contributed to the PFS. Technical studies and development work completed in the first quarter of 2014 have led to significant improvements in the scope and design of the process plant over that included in the PFS. Test findings that positively impacted the PFS flow sheet and infrastructure logistics include the following:

- Pilot test work of the pressure oxidation circuit demonstrated significant reductions in overall water demand and lime consumption required for neutralization. Both will contribute to reductions in capital and operating costs.
- Test work has determined that dry stacking vs hydraulic impoundment of the neutralization residue is feasible allowing greater flexibility for alternative plant site locations closer to the Metates mine site reducing the length of the access route, concentrate pipeline and other related infrastructure.
- Dry stacking along with the modular expansion of the process related components now facilitates the phased expansion of Metates with a significantly smaller physical footprint and reduced initial infrastructure development versus the PFS, including an option to consolidate the project operations at the Metates site under a lower throughput mine plan scenario.
- Several alternate plant sites have been located closer to Metates with proximity to requisite high purity limestone and existing key transportation and mine inputs.

Chesapeake is currently evaluating the opportunity to target mining at lower initial throughputs (30,000 tpd - 40,000 tpd) versus the Phase I 60,000 tpd case in the PFS. Currently, M3 and other leading international consultants are reviewing these smaller initial throughput development scenarios that have lower upfront capital requirements and allow sequential, scalable expansion over the mine life.

Management believes the investigations and test work underway will further de-risk and add significant value to the Metates project. Metates is one of the few world-class, undeveloped precious metal deposits not controlled by a major mining company in a favourable geo-political jurisdiction.

OTHER EXPLORATION PROJECTS

Talapoosa (Nevada, USA)

On November 26, 2010, Gunpoint acquired from Chesapeake a 100% interest in the Talapoosa gold project (“Talapoosa”) located in Lyon County, Nevada.

Talapoosa is a low-sulphidation gold/silver property in the Walker Lane gold trend of western Nevada, approximately 45 kilometers east of Reno. The property consists of 535 unpatented lode mining claims and seven additional fee land sections which cover 10,780 hectares. Since 1977, eight mining companies have drilled 564 drill holes for 71,000 meters along with environmental and metallurgical work. By the late 1980s, four zones of mineralization had been identified – Main Zone, Bear Creek Zone, Dyke Adit, and East Hill.

The Talapoosa project has a NI 43-101 compliant resource estimate (September 2010) hosting a measured and indicated resource of 632,000 ounces of gold (23.1 million tons at a grade of 0.035 oz/t AuEq) and an inferred resource of 326,000 ounces of gold (12.6 million tons at a grade of 0.033 oz/t AuEq) using a cut-off of 0.015 oz/t gold equivalent.

During 2011 Gunpoint completed 15 core holes totaling 3,251 meters at Talapoosa. With the 2011 drill data, Gunpoint re-modeled and re-interpreted the resource with independent consultants. In 2013, Tetra Tech WEI Inc. (“Tetra Tech”) provided an updated NI 43-101 resource estimate adding approximately 380,000 ounces of gold and 5.4 million ounces of silver compared to the previous NI 43-101 resource estimate. Set out in the table below is the updated Measured and Indicated Resource Estimate by Tetra Tech:

Cutoff Au g/t	Ore Type	Category	Tonnes	Grade Au g/t	Grade Ag g/t	Contained gold (ounces)	Contained silver (ounces)
0.45	Oxide	Measured	2,835,890	1.29	18.96	117,253	1,728,323
0.45	Sulphide	Measured	12,741,180	1.22	16.50	501,215	6,760,763
0.45	Oxide	Indicated	1,280,900	1.10	14.25	45,328	586,999
0.45	Sulphide	Indicated	11,504,500	0.94	12.36	349,005	4,573,274
0.45	Oxide	Total M&I	4,116,870	1.23	17.49	162,581	2,315,321
0.45	Sulphide	Total M&I	24,245,860	1.09	14.54	850,220	11,334,037
0.45	Oxide + Sulphide	Total M&I	28,362,500	1.11	14.97	1,012,802	13,649,358
0.45	Oxide - Sulphide	Inferred	10,159,000	0.72	6.65	233,532	2,172,766

(1) Prepared in accordance with National Instrument 43-101 – Standards of Disclosure for Mineral Projects (NI 43-101) and the Canadian Institute of Mining, Metallurgy and Petroleum classification system

(2) The 2013 resource model used ordinary kriging (OK) grade estimate within a three-dimensional block model with mineralized zone defined by wireframed solids

(3) Resource estimate was completed in imperial units with the following conversions:

- 1 gram/tonne = 0.0291667 troy oz/short ton
- 1 tonnes = 1.10231 short ton

(4) A base cutoff grade of 0.45 g/t Au was used for reporting resources

(5) Capping was implemented for gold grades at 23.52 g/t and silver grades at 329.14 g/t

Gunpoint is undertaking a comprehensive study of the historic metallurgical work including the collection of representative composite samples for column leach testing on Talapoosa. Four bulk composite samples from drill core were submitted to McClelland laboratories Inc. in December 2013 for analysis. Gunpoint is waiting for the analysis of the results to be completed. The study will assist in developing the metallurgical flow-path for a preliminary economic assessment study.

Le Cecilia (Sonora State, Mexico)

In 2008, the Company completed its purchase of a 100% interest in the La Cecilia property from the Consejo de Recursos Minerales de Mexico (“CRM”) for the total purchase price of US\$100,000. The project consists of four mineral concessions totalling 6,435 hectares of which one concession comprising 5,641 hectares was staked by the Company.

La Cecilia is a low-sulphidation, epithermal-type gold-silver system related to two well-developed northwest and northeast trending sets of faults centred on “Cerro Magallanes”, a rhyolite dome complex. The mineralization occurs as high grade in vein structures and as lower grade within broader zones of stockworks and breccias. Numerous other anomalous zones of silicification, brecciation and argillic alteration exist across the extent of the flow dome

complex, an area of more than 1 kilometre by 2 kilometres. In 2009 Chesapeake conducted a program of detailed mapping and sampling on La Cecilia.

On October 24, 2013, Gunpoint entered into an agreement to sell a 100% interest in La Cecilia to Precipitate Gold Corp. ("Precipitate") for the total consideration of \$400,000 and 525,000 common shares of Precipitate. The consideration to Gunpoint will be paid over two years scheduled as follows:

- a) Upon execution of the agreement Precipitate will deliver 58,000 common shares to Gunpoint (Received).
- b) Pay to Gunpoint \$125,000 and deliver 233,000 common shares to Gunpoint on or October 24, 2014; and
- c) Pay to Gunpoint an additional \$275,000 and issue 234,000 common shares on or before October 24, 2015

In addition, Gunpoint retains a 1% NSR in the project.

Tatatila (Veracruz State, Mexico)

The Company has acquired through purchase and staking the Tatatila project, a precious metal and polymetallic mining district in Veracruz State. Chesapeake acquired seven concessions of a National Mineral Reserve totaling 2,767 hectares in staged payments totaling US\$56,000 from the CRM, a mining division of the Mexican government. The Company also staked one concession comprising 25,602 hectares.

The Tatatila project covers a 200 square kilometre district characterized by Cretaceous limestones and sedimentary rocks affected by multi-phase intrusions. The main intrusive complex is more than 10 kilometers in diameter and consists of granodiorites, quartz-diorites and granites of Tertiary age. Igneous activity generated intermittent hydrothermal events that formed widespread skarn-type alteration zones along the contact between the calcareous and intrusive rocks. Porphyry and epithermal occurrences have also been found in this district.

In July 2010 Quimicos Minerales de Mexico S.A. de C.V., a private Mexican company, agreed to acquire Tatatila for US\$300,000 in staged payments over four years. The Company has received the 2010, 2011 and 2012 payments totalling US\$145,000 towards the purchase price. The Company retains a 1% NSR in the Tatatila project.

Rio Minas (Oaxaca State, Mexico)

Rio Minas is a silver – rich, polymetallic skarn prospect. To date, five major skarn zones have been identified within a 6 kilometer long, NE trending corridor associated with a NE-trending regional fault system. Rio Minas comprises one mineral concession that was acquired through staking totaling 7,425 hectares.

In 2008 a Phase I soil sampling program was completed on Rio Minas covering 3,750 hectares. The program consisted of 10 parallel sample lines totaling 45 line kilometers. Results reveal a strong, multi-element soil anomaly in the southwestern portion of the area. The large soil anomaly is 1,200 meters long and 200 to 300 meters wide and comprises adjacent zones of elevated and coincident copper, lead, zinc, and silver.

La Gitana (Oaxaca State, Mexico)

La Gitana is a large low sulphidation epithermal system hosting precious metals mineralization that is both structurally and lithologically controlled. During 2005 and 2006, the Company completed 40 diamond drill holes comprising 8,462 meters on the La Gitana project. The drill program primarily tested Cerro di Oro, a 1.5 kilometer long, NW-trending, structurally-controlled, epithermal system where gold-silver mineralization is found as high-grade shoots in a set of N-W trending, sub-vertical structures, and as low grade disseminations within broad zones of quartz stockworks and breccias.

A NI 43-101 compliant technical report on the La Gitana Project concluded that the exploration program undertaken by the Company on the Cerro di Oro zone of the La Gitana project (including detailed surface mapping and sampling, ground geophysics and diamond drilling) provided sufficient information to confirm the existence of well-defined gold-silver mineralization extending 500 meters in length, 50 to 150 meters wide and 50 to 300 meters deep. Step out drilling also discovered additional gold-silver mineralization along strike for over 300 meters to the southeast.

The Company has transferred La Gitana to Gunpoint together with the Talapoosa project and La Cecilia property in Sonora State, Mexico.

Regional Properties (Mexico)

The Company continues to explore for additional gold and silver prospects in western Mexico. At any given time, several targets may be under consideration for possible acquisition through staking or entering into third party option to purchase agreements.

Generative exploration targeting bulk tonnage, near surface gold and silver mineralization proximate to the Metates and Ranchito sites remains an important focus. Among several regional prospects under evaluation, two projects, Nicole and San Ramon, are being advanced to the drill stage. As part of the Nicole project, the Company acquired two concessions from Firesteel Resources Ltd. in 2013 for the total price of US\$125,000. Firesteel retains 2.5% NSR of which the Company has the option to purchase 60% or 1.5% NSR for US\$1,000,000.

El Escorpion (Guatemala)

The Company has an option to purchase the El Escorpion property ("Escorpion"), a 900 hectare concession in eastern Guatemala. To earn a 100% interest, the option payments total US\$351,000 over 5 years. A 1% NSR can be purchased for US\$585,000. Mapping and sampling by Chesapeake has identified two prospective areas with intermediate sulfidation epithermal precious and base metal mineralization.

The Escorpion property is located 85 kilometers by paved road southeast of Guatemala City. Escorpion is situated 7 kilometers southwest and along trend of Tahoe Resources Inc.'s Escobal deposit which has a NI 43-101 compliant indicated mineral resource of 367 million ounces of silver grading 422 g/t, plus 37 million ounces of silver grading 254 g/t in the inferred category. Mineralization at Escobal is associated with steeply dipping and northeast-southwest trending intermediate sulfidation epithermal silver rich quartz veins with significant values in gold, lead and zinc. The Escobal land package completely surrounds the Escorpion project.

The outcropping mineralization at Escorpion appears to have many similarities to that at Escobal and occurs in a fault controlled, intermediate sulfidation epithermal system characterized by several multistage, subparallel silver-lead-zinc quartz-carbonate veins and stockworks. To date, the northeast-southwest trending system has been traced continuously for over 1500 meters along strike and remains open to the northeast and southwest. The system is characterized by carbonate-minor quartz vein swarms in the southwest (Mina Blanca zone) and quartz stockworks and quartz veins in the northeast part of the concession (Escorpion -Los Pozos zones). The epithermal system is hosted in volcanoclastic sediments, porphyritic andesites and rhyodacitic rocks, the same rock types which host mineralization at Escobal.

On June 14, 2013, the Company concluded an agreement in respect of the Escorpion project with Gunpoint, whereby Gunpoint will acquire a 100% interest in the Company's Escorpion project. Gunpoint has agreed to acquire a 100% interest in Escorpion by issuing and granting the following to Chesapeake.

- 500,000 common shares of Gunpoint
- 500,000 warrants exercisable at \$1.50 per share for a term of five years
- A 1.5% NSR royalty in the event Chesapeake purchases the existing 1.0% NSR
- 1.0 million common shares of Gunpoint in the event a NI 43-101 measured and indicated resource estimate of 1.0 million gold equivalent ounces is achieved on the Escorpion property.

SUMMARY OF CONSOLIDATED CONDENSED INTERIM LOSS

	Three months ended March 31,		
	2014	2013	2012
<i>(tabled amounts are expressed in thousands of CAD dollars)</i>

	(0.02)	(0.03)	(0.04)

(1) General and administration ("G&A") consists of general and administrative expenses, professional fees and management fees

The Company incurred a net loss after tax of \$1.0 million (\$0.02 loss per share) for the three months ended March 31, 2014 compared to a loss of \$1.4 million (\$0.03) in the same period in 2013. The \$0.4 million lower loss was primarily due to a \$0.4 million lower in non-cash stock based compensation expense as the majority of the stock options were vested in the prior year.

Other comprehensive loss fluctuated over the fiscal periods. This was mainly due to the volatility of the stock market from international economic environment and the IFRS non-cash adjustment related to the translation of measurement currency to reporting currency.

(3) Certain balances are restated, please see page 13 for further details.

Three months ended March 31, 2014 vs. prior quarters in 2013 and historic quarters in 2012

The Company incurred a net loss after tax of \$1.0 million (\$0.02 loss per share) for the three months ended March 31, 2014. Exploration costs and general and administration expense remained consistent with prior quarters in 2013 and 2012. Stock based compensation expense in the current quarter was significantly lower than the previous historic quarters as majority of the stock options had already been vested.

Other comprehensive loss fluctuated over the fiscal periods. This was mainly due to the volatility of the stock market from international economic environment and the IFRS non cash adjustment related to the translation of measurement currency to reporting currency.

LIQUIDITY AND CAPITAL RESOURCES

Ending balance - cash and cash equivalent	33,097.1	39,001.0	40,736.6

(1) Certain balances are restated, please see page 13 for further details.

As at March 31, 2014, the Company's net working capital was \$34.8 million, down from a net working capital of \$36.1 million as at December 31, 2013. Cash and cash equivalents are primarily held in major Canadian chartered banks and Canadian government securities with short term maturity dates. The \$1.9 million decrease in the cash balance was principally from expenditures of land acquisitions, engineering, exploration and other operating activities, net of working capital adjustments.

Cash outflow from operating activities in the three months ended March 31, 2014 was \$1.5 million. This was primarily attributable to general exploration (\$0.2 million), corporate overhead and professional fees (\$0.6 million) stock-based compensation (\$0.3) and foreign exchange loss.

During the three months ended March 31, 2014, cash outflow from investing activities was significantly lower than 2013. Metates capitalized expenditures were much higher in the prior year as the Company completed the work for the PFS.

The Company's ability to continue as a going concern is dependent on the Company's ability to raise funds. The Company has sufficient working capital to fund the planned development and corporate expenses through 2015.

SHAREHOLDERS' EQUITY

As at the date of this report the Company had 44,416,366 shares and 1,940,000 share purchase options outstanding.

As at the date of this report, the Company has 375,000 shares in escrow.

The following is a summary of stock options outstanding as at the date of this report:

Number of options ('000s)	Vested ('000s)	Exercise price per share	Expiry Date
860	645	\$ 9.10	11-May-15
1,080	540	10.75	5-Feb-17
1,940	1,185		

REGULATORY DISCLOSURES

Off-Balance Sheet Arrangements

As at the date of this report, the Company had no off-balance sheet arrangements as of the date of this report.

Related Party Transactions

The Company's related parties include its subsidiaries, associates over which it exercises significant influence, and key management personnel. Transactions with related parties for goods and services are made on normal commercial terms and are considered to be at arm's length.

The Company incurred the following expenses with related parties during the three months ended March 31:

<i>Amount in '000</i>	2014	2013
Consulting	\$ 98.9	\$ 75.9
Legal	12.3	19.4
Management fees	62.5	62.5
Rental	6.0	6.0

Legal fees were paid or accrued to a legal firm of which one of the partners has been the Corporate Secretary of the Company during 2014 and 2013. Management and rental fees were paid or accrued to a Company owned by an officer of the Company. Consulting and travel and promotion fees were paid or accrued to a director of the Company. These expenses were measured at the exchange amounts agreed upon by the parties. As at March 31, 2014 the Company had amounts payable of \$260,600 (December 31, 2013 - \$188,300) to these parties. These amounts are unsecured and non-interest bearing.

Restatement of prior periods

Balance	Notes	As restated ('000')	As previously reported ('000')
Three months ended March 31, 2013			
Statement of Loss and Comprehensive Loss			
Finance income	(a)	191.5	74.8
Impairment on securities	(b)	10.9	104.6
Loss from investment in associates	(b)	7.2	-
Other comprehensive loss	(b)	(516.3)	(553.8)
Other comprehensive loss attributable to NCI	(b)	-	(2.5)
Loss per share	(a)(b)	(0.03)	(0.03)

- a) During the course of the preparation of the condensed consolidated interim financial statements for the three and six months ended June 30, 2013, management determined that interest income was not being accrued on certain investments held by the Company. These errors are not material to any of the periods presented and have been corrected retrospectively in these statements.
- b) During the course of the preparation of the consolidated financial statements for the year ended December 31, 2013, management determined Gunpoint's investment in Julian Resources Inc. (classified as marketable securities) should be classified as Investment in Associates as a subsidiary of the Company has significant influence over the investee. As a result, other comprehensive income losses were reversed and reclassified as loss from investment in associates for the three months ended March 31, 2013. These errors are not material to any of the periods presented and have been corrected retrospectively in these statements.

Financial Instruments

The following provides a comparison of carrying and fair values of each classification of financial instrument:

	March 31, 2014		December 31, 2013	
	Carrying value \$	Fair value \$	Carrying value \$	Fair value \$
Financial assets				
<i>Fair value to profit and loss ("FVTPL")</i>				
Cash and cash equivalents	33,097.1	33,097.1	35,005.4	35,005.4
Other receivables	620.3	620.3	591.4	591.4
Reclamation bond	186.7	186.7	181.2	181.2
<i>Available-for-sale</i>				
Marketable securities	2,615.3	2,615.3	2,862.9	2,862.9
Financial liabilities				
<i>Other financial liabilities</i>				
Accounts payable & accrued liabilities	915.8	915.8	1,774.7	1,774.7

The fair value hierarchy establishes three levels to classify the inputs to valuation techniques used to measure fair value. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities. Level 2 inputs are other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (prices) or indirectly (derived from prices).

The following table sets forth the Company's assets and liabilities measured at fair value on a recurring basis by level within the fair value hierarchy. Assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement.

	Level 1	Level 2	Level 3	Total March 31, 2014
Cash and cash equivalents	\$ 33,097.1	\$ -	\$ -	\$ 33,097.1
Marketable securities	2,615.3	-	-	2,615.3

Significant Accounting Policies

Principles of consolidation

These consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries, Minerales El Prado S.A. de C.V. (Mexico) and American Gold Capital Corporation (British Columbia). The accounts of American Gold Capital Corporation's wholly-owned subsidiaries, Metates Mining Enterprises LLC (Delaware) and its wholly-owned subsidiary American Gold Metates S. de R.L. de C.V. (Mexico) are also included in these consolidated financial statements. During 2010, the Company acquired an 81.93% interest in Gunpoint Exploration Ltd. (British Columbia) (formerly Christopher James Gold Corp.) ("Gunpoint") in exchange for transferring all of its interest in American Gold Capital US Inc. (Nevada) ("American Gold US") to Gunpoint. These consolidated financial statements include the accounts of American Gold US for 2010 and 2011. From March 26, 2010 onwards, they also include the accounts of Gunpoint as well as the recognition of an 18.07% non-controlling interest in Gunpoint and American Gold US. Subsequent to Gunpoint's financing in October 2012, the revised non-controlling interest is 25.54%. All significant inter-company balances and transactions have been eliminated upon consolidation.

Special Purpose Entities ("SPE's") as defined in SIC 12 Consolidation – Special Purpose Entities are entities which are created to accomplish a narrow and well-defined objective. SPE's are subject to consolidation when there is an indication that an entity controls the SPE. The Company has determined that its investment in Hunt Exploration S.A. ("Hunt") is a SPE that the Company controls. The accounts of Hunt are consolidated with those of the Company.

Business combination

Acquisitions of subsidiaries and businesses are accounted for using the acquisition method in accordance with IFRS 3, Business Combinations. The cost of an acquisition is measured as the sum of the consideration transferred, measured at the acquisition date fair value and the amount of any non controlling interest in the acquiree. Non controlling interests that are present ownership interests and entitle their holders to a proportionate share of the Corporation's net assets in the event of liquidation may be initially measured either at fair value or at the non controlling interests' proportionate share of the recognized amounts of the acquiree's identifiable net assets. The choice of measurement basis is made on a transaction by transaction basis. The excess of (i) total consideration transferred by the Company, measured at fair value, including contingent consideration, and (ii) the non controlling interests in the acquiree, over the acquisition date fair value of net assets acquired, is recorded as goodwill. Acquisition costs incurred are expensed.

Goodwill arising on an acquisition is recognized as an asset and initially measured at cost. Goodwill is not amortized; rather it is tested annually for impairment or at any time during the year that an indicator of impairment is identified.

Cash and cash equivalents

Cash and cash equivalents include cash on account, highly liquid short term deposits and guaranteed investment certificates with major financial institutions, and fixed income securities with a term to maturity of three months or less at the date of acquisition that are readily convertible into known amounts of cash.

Reclamation bond

The Company maintains cash deposits that are restricted to the funding of reclamation costs. For the Talapoosa property in Nevada State, USA, the Company has placed cash on deposit to fund future reclamation costs anticipated under a reclamation plan approved by the State of Nevada. Reclamation deposits are designated as fair value through profit and loss, are recorded at fair value, and are classified as a non-current asset.

Comprehensive income or loss

Comprehensive income or loss is the change in equity (net assets) of an enterprise during a period from transactions, events and circumstances other than those under the control of management and the owners. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners. In accordance with this standard, the Company reports comprehensive income or loss in its statement of operations and accumulated other comprehensive income or loss in its statement of changes in equity. The components of other comprehensive income or loss include unrealized gains and losses on financial assets classified as available-for-sale.

Foreign currency translation

The functional currency of the reporting entity and each of its foreign operations must be assessed independently giving consideration to the primary economic environment in which each operates. Management has determined that the functional currencies of Minerales el Prado, its Mexican subsidiary is the Mexican Peso as this is the currency of the primary economic

environment in which the Company operates. The Company and its other subsidiaries have the Canadian Dollar as their functional currency.

In preparing the financial statements of the individual entities, transactions in currencies other than the entity's functional currency (foreign currencies) are recorded at the rates of exchange prevailing at the dates of the transactions. At each statement of financial position date, monetary assets and liabilities are translated using the period end foreign exchange rate. Non-monetary assets and liabilities are translated using the historical rate on the date of the transaction. Non-monetary assets and liabilities that are stated at fair value are translated using the historical rate on the date that the fair value was determined. All gains and losses on translation of these foreign currency transactions are included in profit or loss.

Exploration and evaluation assets

The Company capitalizes exploration and evaluation expenses at cost for expenditures incurred after it has obtained legal rights to explore a specific area and before technical feasibility and commercial viability of extracting mineral resources are demonstrable.

All direct and indirect costs relating to the exploration of specific properties with the objective of locating, defining and delineating mineral reserves on specific properties are capitalized as exploration and evaluation assets. Government assistance, mining duty credits and optionee commitments are applied against exploration and evaluation assets

The application of the Company's accounting policy for exploration and evaluation expenditure requires judgment in determining whether it is likely that future economic benefit either from future exploration or sale or where activities have not reached a stage which permits a reasonable assessment of the existence of reserves. Management makes certain estimates and assumptions about future events or circumstances, in particular when an economically viable extraction operation can be established. Estimates and assumptions made may change if new information becomes available. If, after an expenditure is capitalized, information becomes available suggesting that the recovery of expenditure is unlikely, the amount capitalized is written off in profit or loss in the period when the new information becomes available.

Exploration and evaluation expenditures are evaluated annually and then reclassified as mineral properties upon completion of technical feasibility and commercial viability.

Equipment

Equipment is recorded at cost. Amortization is provided at annual rates on a declining balance basis over the estimated useful lives of the equipment as follows:

Asset	Rate
Office, furniture and computer equipment	10%
Vehicles	25%
Exploration equipment	10%

Estimates of residual values and useful lives are reassessed annually and any change in estimate is taken into account in the determination of remaining depreciation charges. The cost of maintenance and repairs is charged to expense as incurred. The cost of significant renewals and improvements is added to the carrying amount of the respective asset. When assets are retired or otherwise disposed of, the cost and related accumulated depreciation are removed from the accounts, and any resulting gain or loss is reflected in the statement of operations.

Impairment

The Company reviews the carrying value of long-lived assets for impairment when circumstances indicate an asset's value may not be recoverable. The evaluation is based on the higher of the asset's fair value less costs to sell and its value in use, which is present value of future cash flows expected to be derived from the asset in its current state. If such assets are considered to be impaired, the impairment to be recognized is measured as the amount by which the carrying amount of the assets exceeds its recoverable amount.

Decommissioning obligation

The Company recognizes statutory, contractual and other legal obligations related to the retirement of tangible long-lived assets. These obligations are initially measured at fair value and subsequently adjusted for the accretion of any discount and changes in the underlying future cash flows and discount rate. The asset retirement cost is capitalized to the related asset and amortized to operations over time.

The Company recognizes the fair value of the liability for a decommissioning obligation in the period in which it is incurred and record a corresponding increase in the carrying value of the related long-lived asset. Fair value is estimated using the present value of the estimated future cash outflows to retire the obligation. The liability is subsequently adjusted for the passage of time, and is recognized as an accretion expense in the statement of operations. The increase in the carrying value of the asset is amortized on the same basis as the resource properties.

Share-based compensation

The Company's share option plan provides for the granting of stock options to directors, officers, consultants and employees, which allow them to purchase common shares of the Company. The fair value of all stock based awards is estimated using the Black Scholes option pricing model at the grant date and expensed to operations over each award's vesting period. Stock options

with graded vesting schedules are accounted for as separate grants with different vesting periods and fair values. Changes to the estimated number of awards that will eventually vest are accounted for prospectively. None of the Company's awards call for settlement in cash or other assets. Upon the exercise of the stock options, consideration paid together with the amount previously recognized in the share based payment reserve is recorded as an increase in issued capital. In the event that the options expire or are cancelled, previously recognized compensation expense associated with such stock option is not reversed.

When the Company issues Units that are comprised of a combination of common shares and warrants, the value is assigned to common shares and warrants based on their relative fair values. The fair value of the on the warrants is estimated using the Black Scholes option pricing model at the issuance dates.

Income taxes

The Company follows the asset and liability method of accounting for income taxes. Under this method, deferred tax assets and liabilities are recognized for the deferred tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, and for tax losses and other deductions carried forward.

Deferred tax assets and liabilities are measured using substantively enacted tax rates expected to apply when the asset is realized or the liability settled. A reduction in respect of the benefit of a deferred tax asset is recorded against any deferred tax asset if it is probable that there will be future taxable income to offset. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period in which the change is substantively enacted.

Recognition of interest income

Interest from cash and cash equivalents, fixed income marketable securities and Asset Backed Commercial Paper ("ABCP") is recorded on an accrual basis when collection is reasonably assured.

Loss per share

Loss per share is calculated using the weighted average number of shares outstanding during the reporting period. The Company uses the treasury stock method for computing diluted loss per share. This method assumes that any proceeds obtained upon exercise of outstanding options or warrants would be used to purchase common shares at the average market price during the period. As the Company has recorded a net loss for each of the periods presented, basic and diluted net loss per share are the same as the exercise of stock options or share purchase warrants are anti-dilutive.

Share issuance cost

Professional, consulting, regulatory and other costs directly attributable to financing transactions are recorded as deferred financing costs until the financing transactions are completed, if the completion of the transaction is considered likely; otherwise they are expensed as incurred. Share issue costs are charged to share capital when the related shares are issued. Deferred financing costs related to financing transactions that are not completed are charged to expenses.

Financial Instruments – recognition and measurement

All financial instruments are required to be measured at fair value on initial recognition. Measurement in subsequent periods depends on whether the financial instrument has been classified as fair value through profit or loss, available-for-sale, held-to-maturity, loans and receivables, or other liabilities.

- Financial assets and liabilities classified as fair value through profit or loss are required to be measured at fair value, with gains and losses recognized in net earnings.
- Financial assets classified as held-to-maturity, loans and receivables and other liabilities are required to be measured at amortized cost using the effective interest method of amortization.
- Available-for-sale financial assets are required to be measured at fair value, with unrealized gains and losses recognized in Other Comprehensive Income (loss).

The Company has implemented the following classification:

- Cash and cash equivalents and loans and other receivables are classified as fair value through profit or loss.
- Marketable securities, ABCP and reclamation bonds are classified as available-for-sale.
- Accounts payable and accrued liabilities, margin balance payable and convertible debt are classified as other financial liabilities.

Transaction costs related to financial instruments classified as fair value through profit or loss are recognized immediately into income. For financial instruments classified as other than fair value through profit or loss, transaction costs are added to the financial instrument.

Changes in accounting standards

Accounting standards effective January 1, 2014

IAS 32 Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32).

On 16 December 2011 the IASB published amendments to IAS 32 Financial Instruments: Presentation to clarify the application of the offsetting requirements. The amendments are effective for annual periods beginning on or after 1 January 2014, with earlier application permitted. The Company determined the new guidance would have no significant impact on its condensed consolidated interim financial statements.

Accounting standards effective January 1, 2015

The IASB intends to replace IAS 39 – Financial Instruments: Recognition and Measurement (“IAS 39”) in its entirety with IFRS 9 – Financial Instruments (“IFRS 9”) in three main phases. IFRS 9 will be the new standard for the financial reporting of financial instruments that is principles- based and less complex than IAS 39. In November 2009 and October 2010, phase 1 of IFRS 9 was issued and amended, respectively, which addressed the classification and measurement of financial assets and financial liabilities. IFRS 9 requires that all financial assets be classified as subsequently measured at amortized cost or at fair value based on the Company’s business model for managing financial assets and the contractual cash flow characteristics of the financial assets. Financial liabilities are classified as subsequently measured at amortized cost except for financial liabilities classified as at FVTPL, financial guarantees and certain other exceptions. In response to delays to the completion of the remaining phases of the project, on December 16, 2011, the IASB issued amendments to IFRS 9 which deferred the mandatory effective date of IFRS 9 from January 1, 2013 to annual periods beginning on or after January 1, 2015. The amendments also provided relief from the requirement to restate comparative financial statements for the effects of applying IFRS 9. The Company is currently evaluating the impact the final standard is expected to have on its consolidated financial statements.

Forward Looking Statements

This MD&A contains “forward-looking information” within the meaning of applicable Canadian securities legislation. Such forward-looking statements and information herein include, but are not limited to, statements regarding prospective gold, silver and zinc production, timing and expenditures to develop the Metates property, gold, silver and zinc resources, grades and recoveries, cash costs per ounce, capital and operating expenditures and sustaining capital and the ability to fund mine development at Metates. The Company does not intend to, and does not assume any obligation to update such forward-looking statements or information, other than as required by applicable law.

Forward-looking statements or information involve known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Chesapeake and its operations to be materially different from those expressed or implied by such statements. Such factors include, among others: ability to finance mine development, fluctuations in the prices of gold, silver and zinc, fluctuations in the currency markets (particularly the Mexican peso, Canadian dollar and U.S. dollar); changes in national and local governments, legislation, taxation, controls, regulations and political or economic developments in Canada and Mexico; operating or technical difficulties in mineral exploration, development and mining activities; risks and hazards of mineral exploration, development and mining (including environmental hazards, industrial accidents, unusual or unexpected geological conditions, pressures, cave-ins and flooding); inadequate insurance, or inability to obtain insurance; availability of and costs associated with mining inputs and labour; the speculative nature of mineral exploration and development, diminishing quantities or grades of mineral reserves as properties are mined; risks in obtaining necessary licenses and permits, and challenges to the Company’s title to properties.

Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements or information, there may be other factors that cause results to be materially different from those anticipated, described, estimated, assessed or intended. There can be no assurance that any forward-looking statements or information will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements or information. Accordingly, readers should not place undue reliance on forward-looking statements or information.

Other technical information

Mr. Gary Parkison, Metates Project Manager and a Qualified Person as defined by NI 43-101 is responsible for the technical information on Metates, Mr. Doug Austin, P.E., Senior Vice President, Dr. Art Ibrado, QP Member, MMSA, Project Manager and Mr. Richard Zimmerman, R.G. Environmental Geologist with M3 and Mr. Michael Hester F AUS IMM, Vice President, and Ms. Sylvia Y. Genglet, Senior Geological Engineer of IMC, Dr. Deepak Malhotra, SME, President of Resource Development Inc., and Mr. Grenvil M. Dunn, P. Eng, C. Eng, Director of Hydromet (Pty) Ltd. prepared the NI 43-101 Pre-feasibility study, Reserves Estimates and Mine Planning in accordance with NI 43-101.

E. Max Baker, Ph.D., M. Aust.IMM, President of Gunpoint, is the Qualified Person as defined by National Instrument 43-101 and is responsible for the technical information on Talapoosa.
